

ProTEC[™] Natural Odor Reduction

Effectively Remove Indoor Odors... Naturally!

Let Nature help you control disturbing odors and gases.

Odor control and removal inside air conditioned and refrigerated areas can sometimes be a difficult problem to solve. Quite often all you can do after removing or eliminating the source is to try and “neutralize” gaseous odors. This neutralization is merely a form of masking odors and really **doesn't remove the odor causing bacterial gases**.

Also, some types of odors can also include “**volatile organic compounds**” (VOCs), which are usually created by chemicals. The Environmental Protection Agency (EPA) has found that the concentration of volatile organic compounds (VOCs) — easily evaporating organic compounds with one or more carbon atoms — was up to 100 times higher indoors than outdoors. According to the EPA, indoor air pollution is one of the top five leading health risks in the United States. This can be a real health issue since we spend 80%-90% of our time indoors. Ironically, well-built buildings and high efficiency (SEER) HVAC equipment can often contribute to this problem.

ProTEC™ Natural Odor Reduction filters are simply placed within the HVAC return air, or within a walk-in cooler airflow, and are proven effective in capturing and removing annoying gases and VOC's that cause odor problems. Our safe filters contain specially treated, natural Zeolite minerals and produce no ozone off-gassing.
